KWC LUNA – so beautiful, so practical.

Uncompromising quality is not simply a question of price. The best demonstration of this is the KWC LUNA faucet range. It offers a number of features which can usually only be found in more expensive faucets: a slender, harmonious design with an independent character and an impressive variety of functions to make life in the kitchen easier.

Pull-out spray – smart technology.

The KWC LUNA pull-out spray has it all. Its innovative use of technology will make many kitchen jobs simpler for you.

1 Freedom of movement: Feel free to do whatever you need! With the 60 cm pull-out spray you will find that you can be more flexible than ever before. **2 and 3 Water jet:** Would you prefer a soft Neoperl® stream or a full filtered stream? You can switch from one to another, simply by pressing a button. **4 Limescale protection:** The KWC JETCLEAN system doesn't give limescale a chance. The filter material is so soft that the filter holes open when water flows through them. **5 TURN AND CLEAN:** Simply open the lock, clean the filter and Neoperl® and then close the lock again. **6 Plug-in connection:** A robust design. The pull-out spray fits perfectly into the spout after use. **7 Heat shield:** Naturally you need hot water in the kitchen, but you don't need a hot spray grip. An innovative shielding system ensures that all the parts through which the water flows are effectively insulated.
